

CUSTOMERS & BUSINESS MODEL

1. Our Customers

Primary Customers: Parents

FURORA is designed primarily for parents of children aged 6–12, who are looking for engaging digital experiences that offer more than passive entertainment.

Our initial customer segments include:

- Urban and digitally active families, beginning with India as our initial market
- Digitally active families in international markets who are seeking safer and more meaningful digital experiences for their children
- Parents who value technology, creativity, learning, imagination and child development
- Families looking for a safer, more meaningful alternative to passive or purely entertainment-driven screen time
- India will serve as FURORA's initial market, while the product is designed from the beginning with international expansion in mind.

The Child Is the User. The Parent Is the Customer.

Children interact directly with FURORA and develop the relationship with their companion.

Parents make the purchasing decision and control the account, payments and privacy permissions.

This distinction is central to the business model.

2. What We Offer

FURORA allows a child to:

Choose a digital companion

Discover their interests and personality

Care, Play, Learn & Explore together

Grow alongside their companion

FURORA gradually becomes more personalised through the child's interactions and experiences.

The objective is to create long-term emotional engagement, rather than relying only on short-term rewards or game progression.

3. How We Make Money

Subscription-Based Model

FURORA will primarily operate as a recurring subscription product.

Free / Limited Experience

- Introduces the child and parent to FURORA
- Allows families to experience the core concept
- Provides a clear path to upgrade

Premium Subscription

- Full companion personalisation
- Expanded activities and experiences
- Deeper personality development
- Additional customisation and content
- Ongoing evolution of the child's FURORA

Future Revenue Opportunities

As the product develops, additional revenue streams may include:

- Premium companion customisation
- Special experiences and content
- Family-oriented features
- Licensed physical merchandise
- Brand partnerships that meet strict child-safety standards

The core business remains subscription-led, rather than advertising-led.

This is important because the product is designed for children and should not depend on maximising children's attention or collecting behavioural data for advertising.

4. Our Child-Safety Principles

FURORA will be designed with privacy, safety and parental control as product requirements — not as features added later.

1. Parent-Controlled Accounts

Parents create and manage the child's account, subscription, permissions and privacy settings.

2. Verifiable Parental Consent

Where personal data from children is processed, FURORA will implement appropriate parental-consent mechanisms in accordance with applicable laws.

In India, the Digital Personal Data Protection Act requires verifiable parental consent before processing a child's personal data and places additional restrictions on harmful processing, behavioural monitoring and targeted advertising directed at children.

For international markets, FURORA will implement applicable child-privacy requirements, including COPPA where relevant. COPPA requires covered services directed to children under 13 to provide parental notice and obtain verifiable parental consent before collecting personal information, subject to its specific rules and exceptions.

3. No Targeted Advertising to Children

FURORA will not build its business around targeted advertising to children.

We will avoid using children's behavioural data to create advertising profiles.

4. Data Minimisation

We will collect only the information necessary to provide the product.

Where information is no longer required for its stated purpose, it should be deleted or de-identified according to our retention policy.

5. No Open Social Environment

Children will not have unrestricted access to public profiles, open chat rooms or direct communication with unknown users.

Any future social or community functionality will be designed with strong parental controls and child-safety safeguards.

6. Safe AI Interactions

If AI is used within FURORA, interactions will operate within defined safety boundaries.

FURORA should not:

- Encourage secrecy from parents
- Ask children for sensitive personal information
- Provide dangerous instructions

- Encourage inappropriate or harmful behaviour
- Attempt to replace parents, teachers or trusted adults

7. Parent Visibility & Control

Parents should be able to understand and control how their child's account works, including relevant permissions, data practices and account activity.

Parents should also have mechanisms to request access, correction or deletion of their child's information where applicable.

5. Our Guiding Principle

Build for the child.

Answer to the parent.

FURORA's success will not be measured only by how long a child stays on the platform.

It will be measured by whether the child develops a meaningful relationship with their companion while parents remain confident that the experience is safe, transparent and responsibly designed.
